TECH NOTES
Cockpit Hatch

During the construction of the Su-35/Su-37 Conversion Kit we discovered an error in the shape of the cockpit hatch and cockpit hatch rails.

This error occurred because of an earlier change to the size of bulkhead B2T/B2B. When the size of the bulkhead was reduced, the cockpit hatch rails should have been updated to match the new cross-section.

This tech note contains full-size drawings that can be printed and used as templates to cut a new cockpit hatch and cockpit hatch rails.

The cockpit hatch and cockpit hatch rails that came with the Sukhoi Su-27 kit should be discarded as they will not fit correctly.
